Art Unit: 1746

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Klausner in view of Othmer et al.

Re claim 1, Klausner discloses a (computer based) washing machine inherently comprising a storage tank, an inner tub, a load part, water supply and draining means, a drive micom controlling the load part, key input part, a display part and a memory that differs from the claim only in the recitation of the interface for inputting and outputting data with an external device and storing data transferred from the external device into the memory. Othmer discloses a external device for interfacing with a washing machine which is computer based where the external device inputs and outputs data into the memory. It therefore would have been obvious to one having ordinary skill in the art to have the device of Klausner, interfacing with a server as taught by Othmer, since Othmer teaches the controlling/monitoring of a washing machine remotely. Re claim 2, Klausner and Othmer disclose the LCD. Re claim 3, no patentable distinction is deemed to exist between the memory as claimed and the memory as taught by Klausner. This is also applicable to the subject matter of claim 6, namely the interface part. Re claim 4, Othmer discloses the server. Re claim 5, Klausner discloses the port (19). Re claims 7 and 8, Klausner discloses the memory and micom as claimed.
